**STG** - (B1) U.S. Patent (no pre-grant pub.) after Jan. 2, 2001  
**AB** - The present invention relates to sulfur tolerant catalyst composites useful for  
 reducing contaminants in exhaust gas streams, especially gaseous streams  
 containing sulfur oxide contaminants. More specifically, the present invention is  
 concerned with improved NOx trap catalysts for use in diesel engines as well as  
 lean burn gasoline engines. The sulfur tolerant NOx trap catalyst composites  
 comprise a platinum component, a support, a NOx sorbent component, and a  
 spinel material prepared by calcining an anionic clay material represented by the  
 formula  $M_m N_n (OH)(2m+2n) Aa.bH_2O$ , wherein the formula is defined herein.  
 The sulfur tolerant NOx trap catalyst composites are highly effective with a  
 sulfur containing fuel by trapping sulfur oxide contaminants which tend to  
 poison conventional NOx trap catalysts used to abate other pollutants in the  
 stream. The sulfur tolerant NOx trap catalyst composites are suitable for diesel  
 engines because the composites can be regenerated at moderate temperatures  
 with rich pulses, rather than at high temperatures.
